

## Sit Spot Activity

### Organization:

**Title:** Sit Spot Activity

**Summary:** Students engage in a sit spot activity reflecting on how they can live in reciprocity with the land. Following this, teacher leads a discussion with students regarding the nature of the Original Instructions that are transmitted through the land to Indigenous peoples.

**Big Idea:** Big Idea B. Indigenous Knowledge is Place-Based: *Indigenous knowledge varies according to the land a group is situated on and the ways in which they interact with it.*

**Inquiry Question:** Inquiry Question 2. What does it mean to say that Indigenous knowledge is place-based?

**Duration:** 1 Class Period

**Learning Environment:** Outdoor

**Season:** Summer, Spring, Fall

**Materials:**

- Nature of the Original Instructions.pdf

### Meta Data:

**Content Type:** Activity

**Bundle:** IK

**Theme:** Indigenous Knowledge Systems

**Subject Area:** Environmental Education, Geography, History, Outdoor Education, Science, Social Studies

**Curriculum Focus:** 7-10

**We recommend inviting an Indigenous community member into the learning space to help facilitate this Learning Activity.**

### Sit Spot Activity

- Students choose a place at their school grounds, a local park, or at ELEEC to sit in for approximately ten minutes. (Some learners may prefer to walk through their space and can be encouraged to do so.) While sitting in or walking through their space, students will consider the following question:

*What does the land provide to us and how can we give back to the land?*

*Sitting in or walking through your spot, use your five senses to notice what the land has to teach you about this question. For instance, what do you hear? See? Smell? Feel? and taste?*

*You may wish to record what you notice in a notebook or on a piece of paper.*

*Be prepared to share your observations with the group after.*

Queen's University Indigenous Land-Based Learning STEM  
Queen's University Biological Station

- Before students are sent off, they should be encouraged to quiet their minds and notice the little things. They do not need to focus intently and directly on the question but should be open to what their five senses have to tell them.
- Afterwards students can be encouraged to share the answers revealed to them by the land.

## Extension: Original Instructions

- Teacher leads a discussion with students regarding the nature of the Original Instructions that are transmitted through the land to Indigenous peoples. The land teaches us that all humans have a holistic and interconnected relationship with the land that must be maintained by living with reciprocity and respect.
- Teachers get talking points to lead the discussion from worksheet for teachers found in **Nature of the Original Instructions.pdf**.
